REWEAR · LOW FIDELITY · 390 × 844 · GRAYSCALE

Wireframes for a private wardrobe

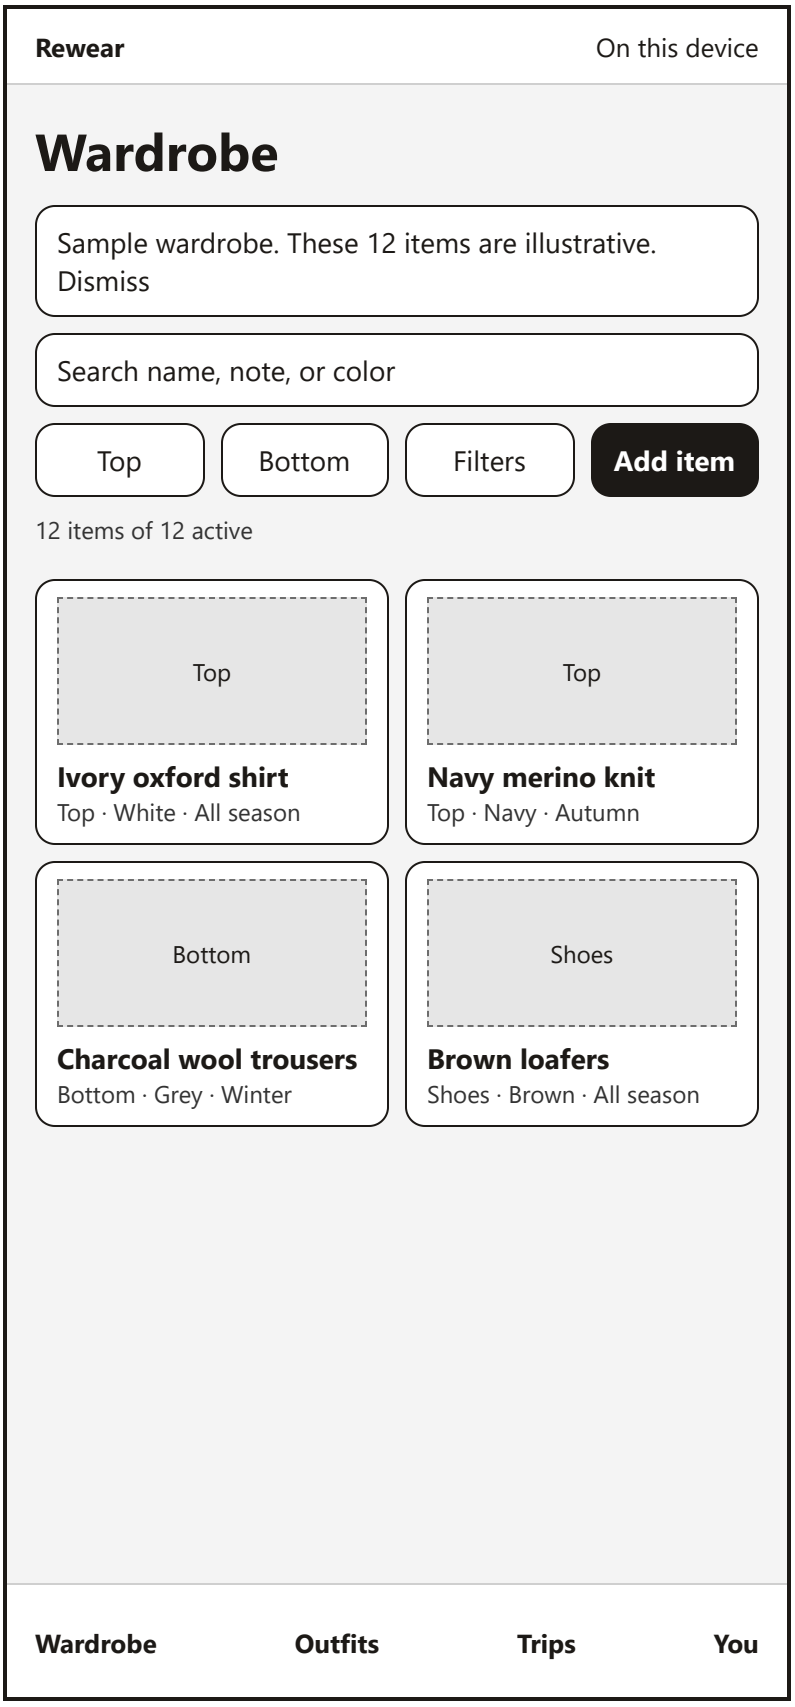

Annotated frames for the core path: start, find or add an item, save an outfit, read a suggestion, pack a trip. Copy matches the prototype. These are not photographs of people and not a Figma file.

W-01 WELCOME

One decision, then the wardrobe.

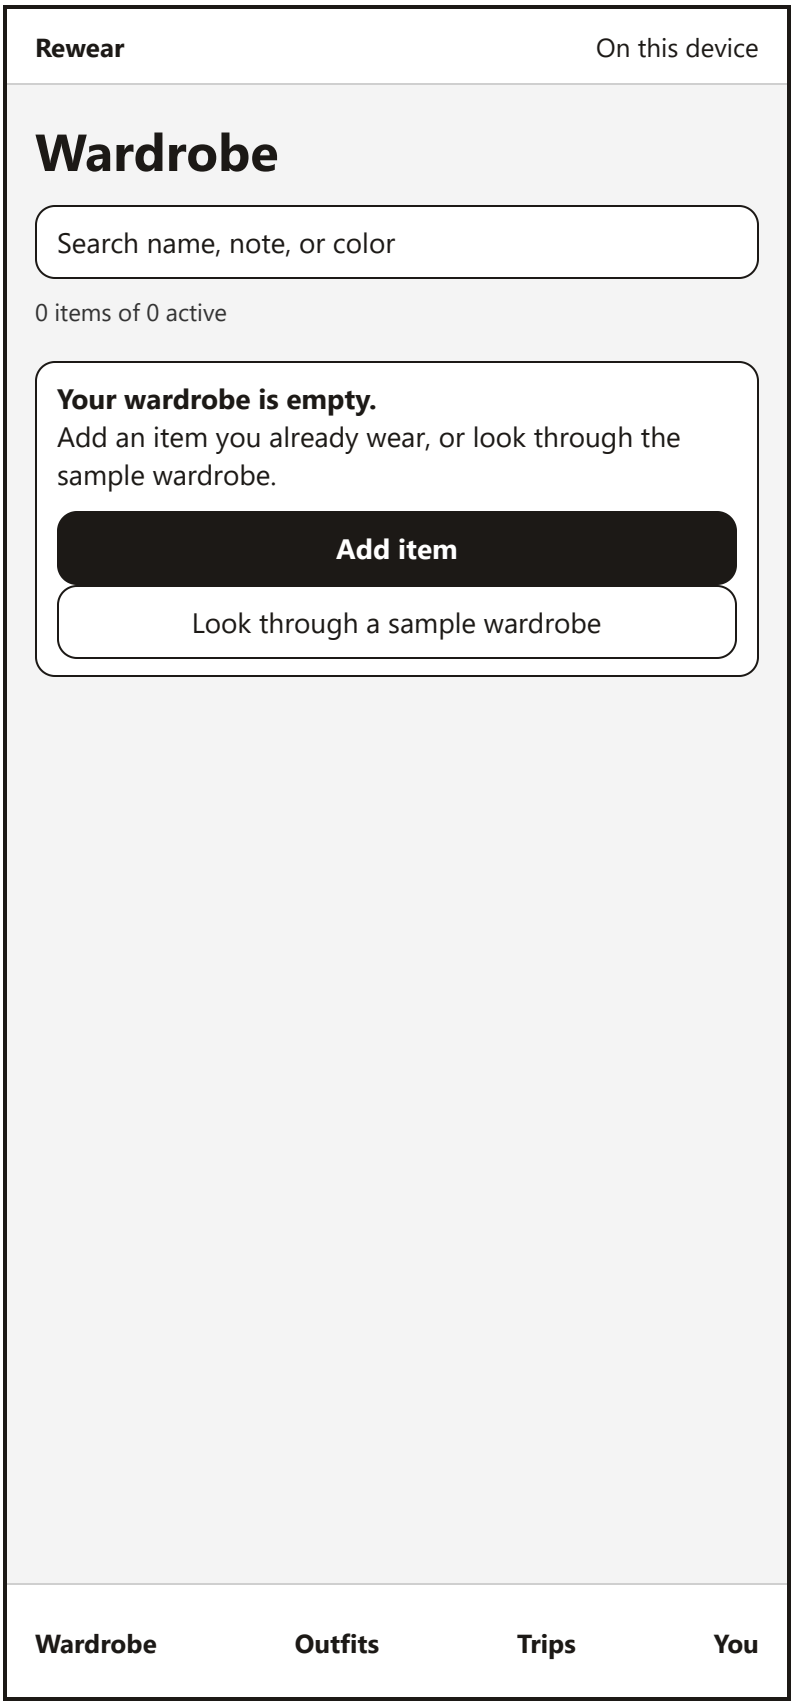

1. The title is the UVP, not a brand essay.
2. Sample data is a primary path so the outfit job is reachable.
3. Empty start is equal in size, secondary in weight.
4. Storage is explained before a photo exists.

W-02 WARDROBE

A grid with words on every card.

1. Banner tells the truth about sample clothes.
2. Category chips stay on the page. Color and season open in Filters.
3. Add item is next to search, not hidden in a menu.
4. Dashed blocks stand in for photos. The name still identifies the item.

W-03 EMPTY

The empty state names both ways in.

1. No illustration of a sad closet.
2. Add is first. Sample is still available.

Add item

A name, category, color, season, and how dressy it is are enough to save. A photo is optional, and it is not scanned.

Name

Category · Top

Color · Navy

Season · All season

Dressiness · Smart

Dressiness is only used to match an occasion. It is not a rule about you.

Price, optional

Photo, optional. No photo yet. Choose a photo.

Save item

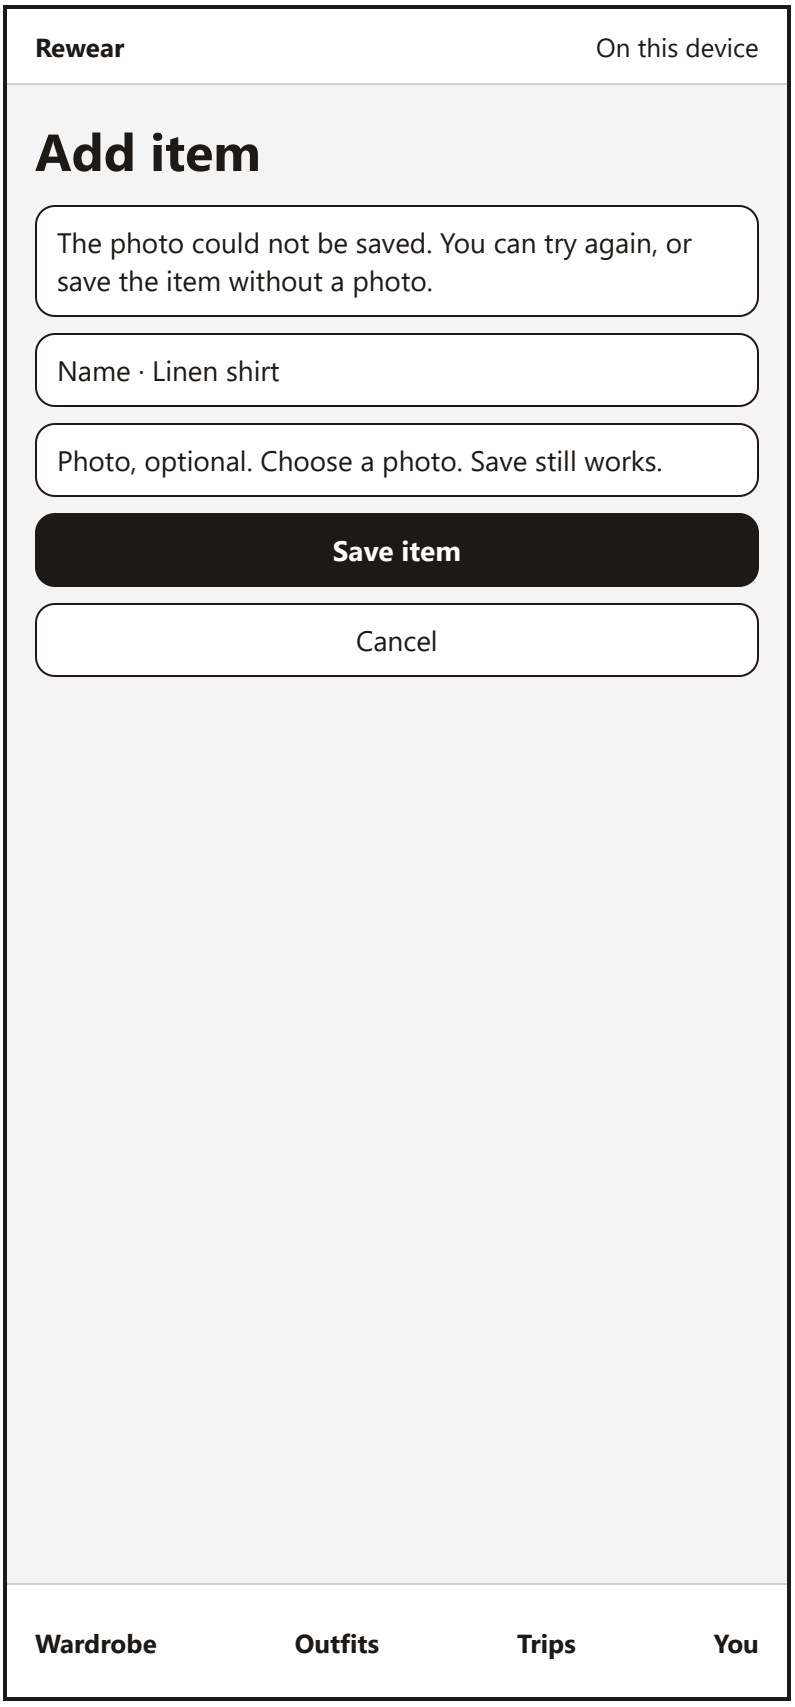

Cancel

Wardrobe **Outfits** **Trips** **You**

W-05 ADD ITEM

Manual fields are the form, not a backup link.

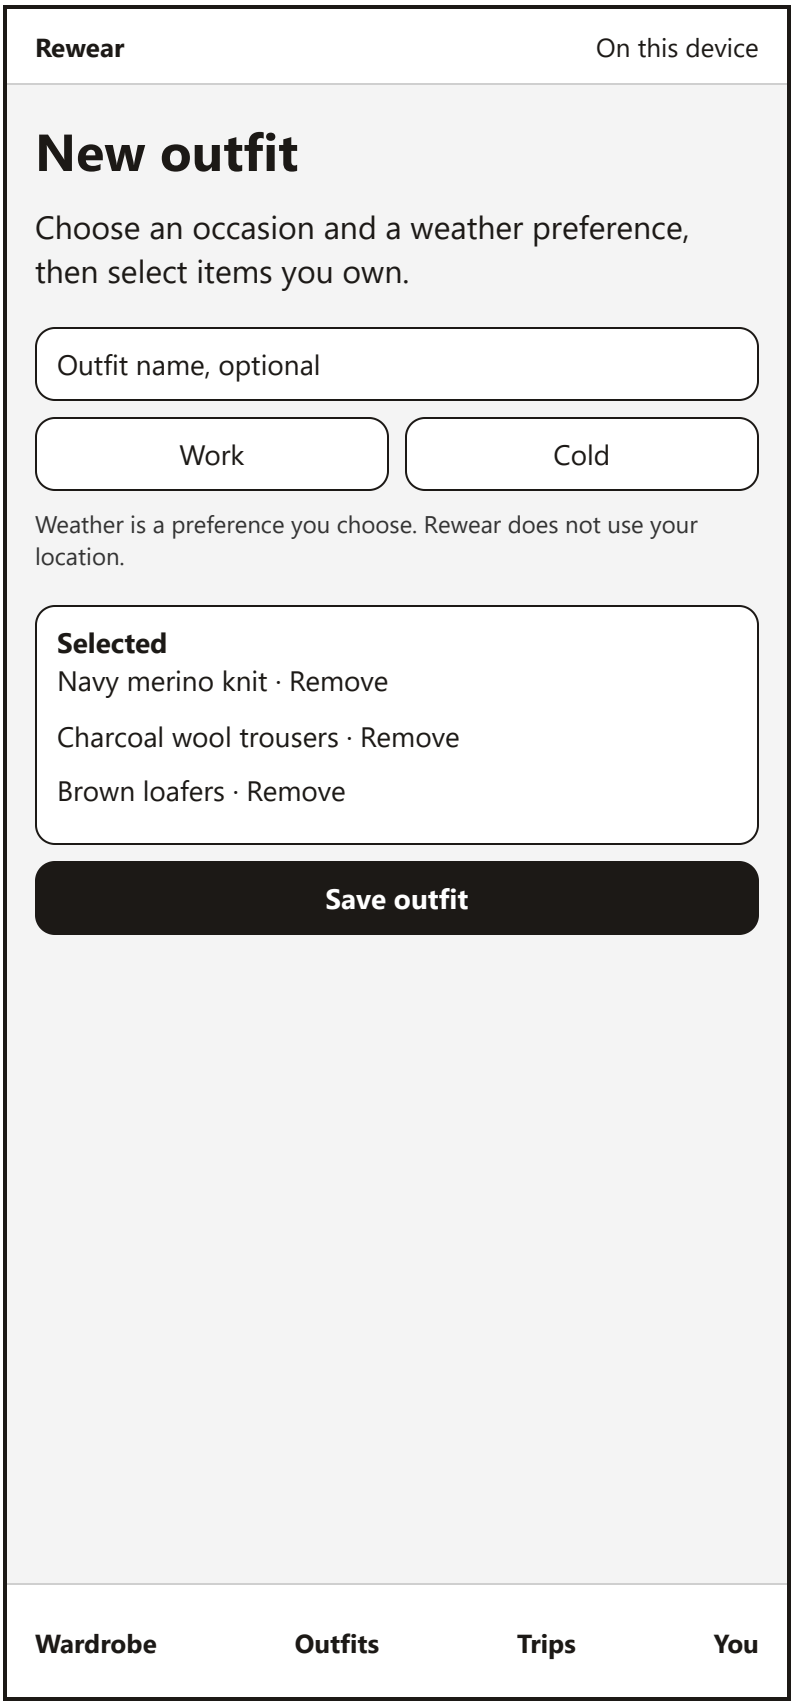

1. Required tags are the ones suggestions use.
2. The dressiness helper blocks a moralizing reading.
3. Price can stay blank. Cost per wear waits.

W-06 PHOTO FAILURE

Same screen. Save stays put.

1. Retry is choosing a photo again.
2. There is no dead end and no separate manual mode.

W-08 OUTFIT BUILDER

Occasion is stored, not implied.

1. Two decisions, then a selection from owned items.
2. The builder does not hide clothes that break a suggestion rule.
3. Blank name saves as “Work · Cold”.

Rewear On this device

Suggestions

Suggestions use the tags you set. Each one explains the match.

Work | Cold

Navy merino knit, Charcoal wool trousers, Navy overcoat, Brown loafers

Why this was suggested

Each piece is tagged smart or formal, which fits work.

Weather preference is cold, so seasons are limited.

Includes Navy overcoat as an outer layer.

Save outfit

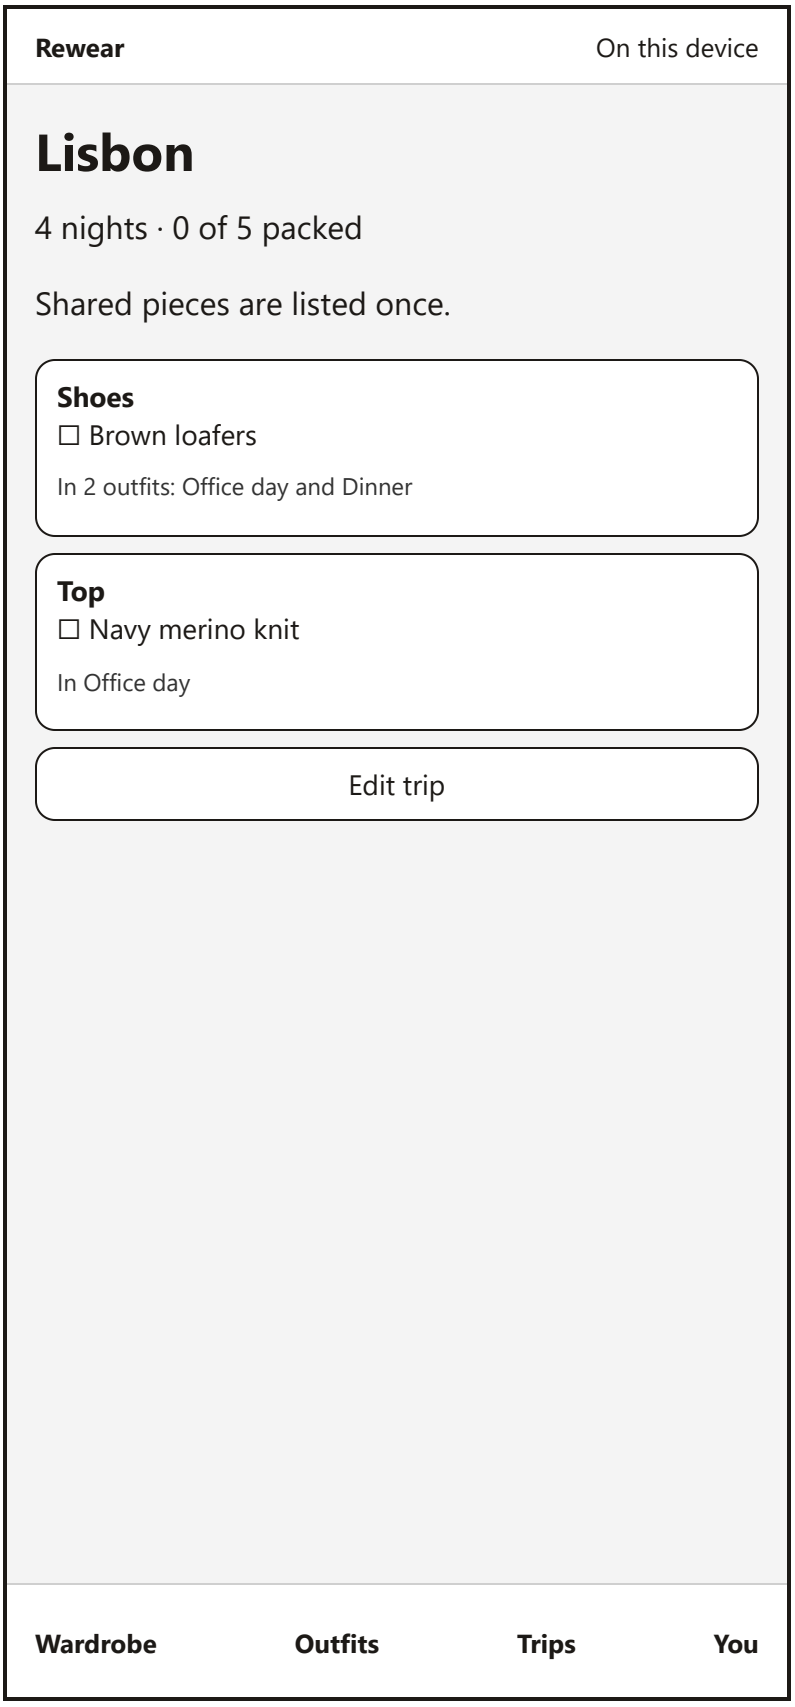

Dismiss

Wardrobe **Outfits** **Trips** **You**

W-09 SUGGESTIONS

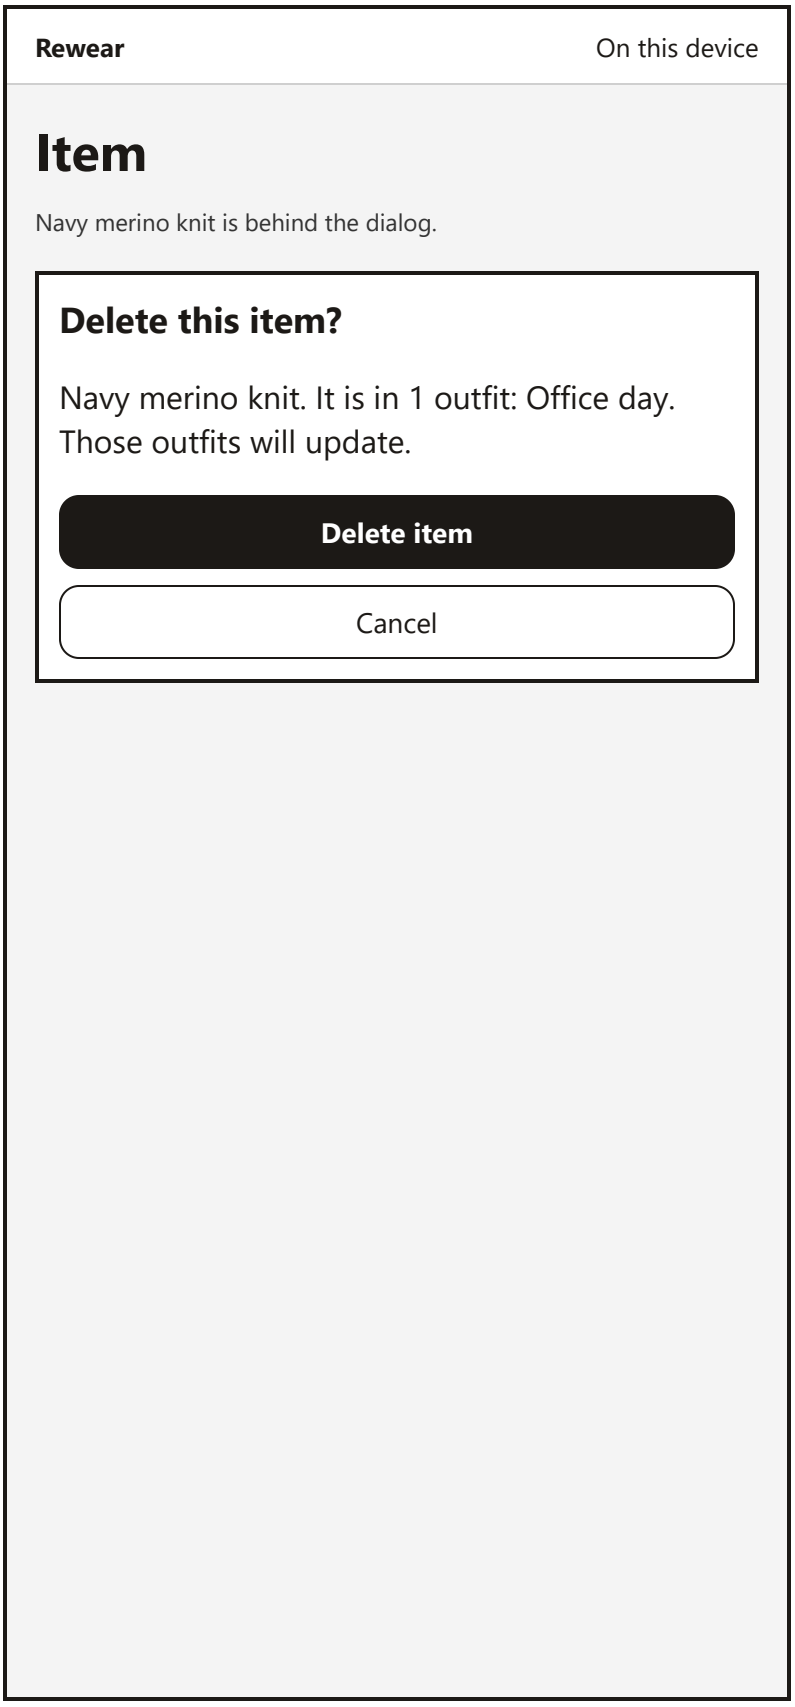

The reason is part of the card.

1. Save and dismiss are both full controls.
2. Factors name tags, not taste.
3. A missing layer is said out loud if no coat matches.

Duplicates are visible by being absent.

1. The shared shoe is one row and names both outfits.
2. Nights do not multiply the clothes.
3. Checkboxes are the packing act.

W-15 DELETE CONFIRM

The dialog says which outfits change.

1. Cancel is always present.
2. Archive is the other verb, on the detail screen, not in this dialog.

W-16 OFFLINE

A banner, because the data is already local.

1. No retry spinner pretending there is a server.
2. Add, edit, and pack still work in the prototype.
